

Name _____ Date _____ Sec. _____

Name:

2

Date:

A statistical question is one for which you don't expect to get a single answer. In fact, you expect to get a variety of different answers. All of the answers collected are data which can tell you a great deal about trends and provide other information about your data set.

1. Identify each of the following a statistical(S) or non-statistical (NS) question. Tell why the question is or is not statistical.

How tall am I?

Explanation: _____

How tall are the students in my school?

Explanation: _____

How much time do sixth graders in my school spend on doing homework every day?

Explanation: _____

2. The following is a sample of the top students' results from a class.

Name	Score
Arianna	90%
Selena	92%
Jim	88%
Jahmeisha	94%

Is the data in the table above is statistical.

What statistical question could have been asked to get this data?
